Professional Summary

Motivated and enthusiastic MCA student with a good command of the full stack development field, Python, AI, Machine Learning, and Databases. With my skills in creating academic and real-world projects using modern technologies and approaches to problem-solving, I am looking for an entry-level opportunity to apply my technical expertise, learn new skills, and grow with a reputed organization.

Education

Masters of Computer Application (MCA), East Point College of Higher Education 2024 – 2026
CGPA - Pursuing

Bachelors of Computer Application (BCA), Vagdevi Vilas College 2021 – 2024
CGPA - 7.84

Pre – University Education (PU), Narayana PU College 2019 – 2021
Percentage - 88%

Secondary School Leaving Certificate (SSLC), K K English High School 2018 – 2019
Percentage - 76.32%

Skills

Programming Languages — Python, Java, C, HTML5, CSS3, JavaScript | **Frameworks & Libraries** — Django, Bootstrap | **Databases** — MySQL, SQLite | **Tools** — VS Code, Android Studio, Antigravity | **Soft skills** — Teamwork, Time Management, Problem Solving, Adaptability.

Projects

Event Management System HTML, CSS, JavaScript, MySQL

- Designed and developed a full-stack event management application to automate event registration, scheduling, and participant management.
- Implemented responsive user interfaces and MySQL database integration to streamline event operations and improve user experience.
- Developed CRUD functionality and database-driven workflows for efficient event data management and administration.

Bitcoin Price Prediction Using Machine Learning Python

- Built a machine learning model to predict Bitcoin prices by preprocessing historical datasets and implementing feature engineering techniques.
- Improved prediction reliability through data cleaning, model training, and performance evaluation using standard machine learning workflows.
- Analyzed historical cryptocurrency trends to support data-driven investment insights using Python-based data analysis.

Organic Food Traceability System Using Blockchain HTML, CSS, JavaScript, Python, SQLite

- Developed a blockchain-based traceability platform to improve transparency and authenticity verification across the organic food supply chain.
- Designed secure data storage and transaction workflows, enhancing data integrity through tamper-resistant blockchain implementation.
- Integrated frontend and backend components to enable real-time product tracking and consumer verification.

AI-Powered Digital Twin Healthcare Intelligence Platform using Multi-Agent AI HTML, CSS, JavaScript, Python, SQLite

- Developed an AI-powered Digital Twin Healthcare Platform for building patients' virtual health models using medical data, wearables, and clinical information for intelligent monitoring.
- Created a Multi-Agent AI architecture featuring health-monitoring, predictive, diagnostic, and treatment recommendation agents.
- Engineered the platform with Machine Learning, LLMs, RAG, and XAI for providing trusted healthcare insights, knowledge-aware responses, and treatment recommendations.

Internship

Vtech Integrated Solutions 04/2024 – 05/2024

- Developed responsive web application modules using Python, Django, HTML, CSS, and MYSQL, improving application functionality and user experience.
- Built and integrated backend features with database connectivity, reducing manual data handling through automated CRUD operations.
- Collaborated with mentors to debug, test, and deploy web application components, improving code quality and application stability.

Excerpt Technologies PVT LTD 07/2026 – 09/2026

- Developed and trained Machine Learning models for data preprocessing, feature engineering, classification, and prediction using Python and Scikit-learn.
- Implemented Deep Learning techniques using neural networks for pattern recognition, model training, and performance evaluation on real-world datasets.
- Applied AI and ML workflows including data analysis, model optimization, evaluation, and visualization using Python, Pandas, NumPy, and Matplotlib.
